Mark,

It was nice to chat with you as well. These studies are fascinating, and add a lot of understanding to the CFR contamination.

Thanks for all that you are doing.

Neal

Hi Neil,

Please confirm you get this as this is a bunch of attachments and may be scrubbed on my end or yours.

It was nice to chat with you. I am attaching the following to this email (in chronological order):

1. Nakayama et al., 2007 (seminal work on PFAS in Cape Fear watershed)
2. Strynar et al., 2015 (discovery of novel PFAS in CFR emanating from DuPont/Chemours)
3. Sun et al., 2016 (analysis of legacy and novel PFAS in drinking water in Pittsboro, Fayetteville and Wilmington, NC)
4. McCord and Strynar (analysis of additional novel PFAS in Cape Fear river near Chemours)
5. Galloway et al., 2020 (analysis of PFOA and GenX in soil and water around the Parkersburg, WV DuPont/Chemours facility)

I am looking for the Science Hub entry for any associated data that went along with these papers. I don't recall when we started having to do that. However as soon as I can find that info I will send it along.

Last I would say please email or call if you have any questions about this work. I know I dumped a lot on you here and I am glad to help you understand what it is we have done on the Cape Fear river in the past in these studies.

Cheers,

Mark

Dear Dr. Stryner,

Along with two other law firms, I represent the residents in New Hanover, Brunswick and Pender Counties who have brought an action against Chemours to recover the costs of certain damage caused by its release of PFAS into the Cape Fear River and Basin.

I have been following your work on the Cape Fear River, and I was wondering if you would have some time to discuss your work?

I look forward to hearing from you.

Sincerely yours,

Neal Weinfeld
